(54) Title: METHOD OF PROVIDING MULTIMEDIA MESSAGING SERVICE

(57) Abstract: If a recipient's mobile communication terminal supports a multimedia messaging service (MMS), previously stored MMS data are read out. If not so, only short message service (SMS) data among the MMS data are read out. The retrieved MMS or SMS data are transmitted to the recipient's mobile communication terminal via a mobile communication repeater. When text data are input through a sender's mobile communication terminal while the transmission of a message is requested by the sender's mobile communication terminal, the text data are transmitted together with the MMS or SMS data to the recipient's mobile communication terminal.
